Project - Website

Tailwind

Installation using PostCSS

utility-first CSS framework.

Razorpay website clone using Tailwind

Use Tailwing either by one of these 2 Methods.

① Use CDN link of Tailwind.

② ⓐ Download Node.
npm install -D tailwindcss postcss autoprefixer
vite

npx tailwindcss init -p

ⓑ Tailwind CSS intelisense Extension.
ⓒ Add * in content — tailwind.config.js
ⓓ Add scripts in package.json "start": "vite"
ⓔ Create main.css & insert these 3 lines & finally
link it with HTML (i) @tailwind base;
(ii) @tailwind components;
(iii) @tailwind utilities;

npm run start

Created Razorpay website Navbar.
       using Tailwind

---

npm init
npm i vite

Development Dependencies

npm install (D) tailwindcss postcss autoprefixer
npx tailwindcss init

postcss.config.js ⟶ Paste
tailwind.config.js ⟶ paste

package.json :-   "scripts" : {

                              "start" : "vite",
                       }

main.css → Paste 3 lines
index.html → link main.css

npm start ⇒ To start
Control + C ⇒ To Quit

(28 Jan.)

Loading="lazy" in images

Created Hero Section
